DIVISION OF
OIL, GAS & MINING

Dear Mr. Braxton:

Pursuant to your letter of January 14, 1987, this letter is to report that the following mines permitted by Energy Fuels Nuclear, Inc. were inactive for the entire calendar year, 1986.

1. Straight Creek Mine, ACT/017/018
2. Hillside Mine, ACT/037/015

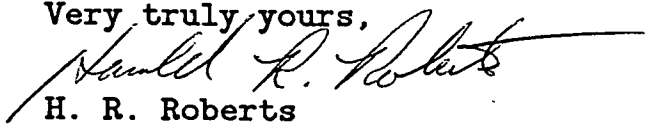

As you are aware, there was a limited amount of activity at the Sahara mine, ACT/017/018, in the form of removal of the shop building and associated equipment. As outlined in our letter of January 13, 1987, we will be removing the trash and unused equipment which was left subsequent to the removal of the shop building.

During the calendar year 1986, there was a limited amount of mining activity at the Repete mine, ACT/037/038. This activity involved the removal of approximately 1,383 tons of ore grade material. This work was completed prior to the end of December, 1986. There was no additional surface drilling or disturbance around the mine portal or access road. The mining activities resulted in no addition to the surface extent of the mine dumps.

At this point we have no additional plans for activities at any of the above referenced mines during 1987.

This information will hopefully complete the requirements outlined in your letter of January 14, 1986. If you have any questions, please feel free to call.

Very truly yours,

H. R. Roberts
Senior Project Engineer
